About Me

Full-stack web developer and final-year Computer Science student (BSc Hons), specialising in AI-driven applications, backend engineering, and cloud infrastructure. Proven track record delivering production-grade software across healthcare tech and industrial digitalisation, with a strong focus on clean architecture, model integration, and real-world impact.

Work Experience

AI Developer

Mar 2026 – Jun 2026

Fertoolity · Hospital Universitari i Politècnic La Fe, Valencia

- Developed deep learning models in Python using PyTorch and MONAI (NVIDIA Clara ecosystem) to analyse, process, and segment medical imaging data; leveraged ITK-SNAP and 3D Slicer for dataset validation and annotation.
- Optimised model architectures and fine-tuned performance metrics to achieve high diagnostic accuracy on gynaecological imaging datasets.
- Designed and implemented a FastAPI backend to integrate, deploy, and serve AI models with efficient, low-latency inference endpoints.
- Collaborated closely with clinical specialists at Hospital La Fe to translate complex medical data into production-ready intelligent software tools.

Education

BSc (Hons) in Computer Science

Mar 2026 – Jun 2027

Canterbury Christ Church University (via MSMK, Madrid)

- Specialisations in Artificial Intelligence, Cybersecurity & Cloud Systems.
- Participated in cybersecurity hackathons; conducted risk audits under NIST framework.
- Deployed distributed ML models on AWS using TensorFlow within cloud-native environments.
- Python (TensorFlow, scikit-learn) · Java · SQL · AWS · Docker

Higher National Diploma — Web Application Development

2024 – 2026

La Florida Universitaria, Valencia (Grado Superior DAW)

Courses & Certifications

AWS Certified Cloud Practitioner

2025

Amazon Web Services — La Florida Universitaria — Core services (EC2, S3, RDS, Lambda), cloud security, pricing models, and architecture best practices.

Projects

FitForge [Backend] [Frontend]

~5 months

Final Degree Project (TFG) · Full-Stack Developer

PHP 8.2, Symfony 7, Angular, MySQL, Docker, JWT

- Built a fitness SPA with personalised workout and diet catalogues, powered by a star-rating recommendation engine (1–5).
- Designed a 14-table MySQL schema and a REST API of 33 endpoints with JWT auth and role-based access control (user / admin).
- Architected the Angular frontend with standalone components, lazy-loaded routing, reactive forms, and custom HTTP interceptors.
- Containerised the full stack with Docker (PHP-FPM, Nginx, MySQL); managed via Git feature branching and documented all API endpoints.

Legacy Land Mapper [GitHub]

~3 months

Personal Project · Full-Stack Developer & Sole Author

Python 3, Pandas, Leaflet.js, GeoJSON, HTML5/CSS3

- Built a geospatial tool that auto-generates interactive HTML maps of Spanish land parcels from Excel/CSV inputs.
- Implemented a multi-threaded backend (20 workers) querying the Spanish Cadastre WFS API, cutting bulk fetch times by over 90%.
- Processed raw cadastral data with Pandas into GeoJSON with accurate polygon boundaries and rich metadata.
- Delivered output as a single portable HTML file — satellite/street toggle, real-time search, area filters, per-parcel stats, mobile swipe UI.

Skills

Programming Languages: JavaScript, TypeScript, Python, PHP, Java, SQL

Frameworks & Tools: Angular, Symfony, FastAPI, Node.js, Docker, Git, REST APIs, PostgreSQL, HTML5/CSS3

AI & Cloud: PyTorch, MONAI, TensorFlow, scikit-learn, AWS (EC2, S3, RDS, Lambda), NVIDIA Clara

Languages: Spanish — Native Catalan — Native English — Advanced (C1)
